Total No. of Printed Pages:3

### Enrollment No.....

# Faculty of Engineering

End Sem (Even) Examination May-2022 EN3ES18 Basic Mechanical Engineering

Programme: B.Tech. Branch/Specialisation: All

Duration: 3 Hrs. Maximum Marks: 60

Note: All questions are compulsory. Internal choices, if any, are indicated. Answers of Q.1 (MCQs) should be written in full instead of only a, b, c or d.

Steam Table may be permitted during examination.

Stea	n Tab	le may be perr	mitted during e	examination.	,	
Q.1	i.	Area under stress strain diagram up to fracture point is called-			1	
		(a) Strength				
	ii.	Percentage composition of carbon in cast iron is-			1	
		(a) $0.3 - 0.7$	(b) 0.7 -1.5	(c) $1.5 - 1.8$	(d) above 2	
	iii.	For a cyclic process, the change in the thermodynamic property is			1	
		always				
		(a) Zero	(b) One	(c) Negative	(d) Data insufficient	
	iv.	A refrigerator	operates betw	reen - 3 °C and	57 °C. The COP is-	1
		(a) 5.5	(b) 4.5	(c) 19	(d) 1.22	
	v. Range of compression ratio for petrol engine is-		e is-	1		
		(a) $6 - 12$	(b) $15 - 22$	(c) $1-5$	(d) 0 - 1	
	vi.	vi. Number of ports in four stroke diesel engine is-		e is-	1	
		(a) Three	(b) Two	(c) One	(d) Zero	
	vii.	Which of the	following is a	water tube boile	er?	1
		(a) Cochran (b) Ba		(b) Babcock a	b) Babcock & Wilcox	
		(c) Lancashire	e	(d) All of these		
	viii.	Boiler genera	ting steam at 5	0 bar pressure i	s called-	1
		(a) High press	sure boiler	(b) Medium p	oressure boiler	
		(c) Low press	ure boiler	(d) Supercriti	cal boiler	
	ix.	ix. The point at which the total area of a plane figure is assumed to concentrated is known as?			ne figure is assumed to be	1
	(a) Centre of Gravity (b) M		(b) Moment of	(b) Moment of Inertia		
		(c) Centroid		(d) None of these		
	х.	Moment of in	nertia of a rect	angle of base 4	cm and height 6 cm about	1
	horizontal axis, X-X, passing through CG is (cm <sup>4</sup> )				s (cm <sup>4</sup> )	
		(a) 72	(b) 36	(c) 12	(d) 8	
					рт	$\circ$

(b) Hooke's Law

Explain the construction of micrometre with the help of a neat 3

Define the following terms:

(c) Mechanical draught

(a) Hardness

Q.2 i.

	iii.	A tensile force of 600 N is applied to a steel wire of 2 mm diameter and 15 mm long. The modulus of elasticity of the material is	5
		210 GN/m <sup>2</sup> . Find (a) stress in the wire, (b) strain, (c) elongation and (d) percentage elongation.	
OR	iv.		5
Q.3	i.	State Kelvin Planck and Clausius statement of second law of thermodynamics.	2
	ii.	Air enters a compressor at 1 bar and 25 °C having volume of 1.8 m <sup>3</sup> /kg and is compressed to a pressure of 5 bar isothermally. Determine the work done and heat transferred.	3
	iii.	Explain construction and working of vapour compression refrigeration system with neat sketch.	5
OR	iv.	Find the enthalpy of steam at pressure of 15 bar when the steam is- (a) Wet and its quality is 0.8.	5
		<ul><li>(b) Dry and Saturated</li><li>(c) Superheated to temperature of 300°C</li></ul>	
		Use specific heat at constant pressure for superheated steam as 2.3 kJ/kg. K	
Q.4	i.	What are the differences between two-stroke and four-stroke engines? (at least 8 points).	4
	ii.	Derive the formula for efficiency of Otto cycle. Draw neat P-V and T-S diagram. Clearly state the assumptions made.	6
OR	iii.	An engine working on an ideal diesel cycle is supplied with air at 0.1MPa and 40°C. The compression ratio is 18 and heat supplied is 1500 kJ/kg. Calculate (a) cut-off ratio (b) cycle efficiency and (c) work done per unit mass of air.	6
Q.5	i.	Write in brief about the following:  (a) Mountings  (b) Accessories	4

(d) Steam jet draught

- ii. A boiler generates 2500 kg of dry and saturated steam per hour at a pressure of 15 bar from the feed water entering at 25 °C. Coal burnt is 350 kg/hour on the grate with calorific value 32000 kJ/kg. Calculate its equivalent evaporation "from and at 100 °C" and efficiency of boiler.
- OR iii. Explain construction and working of Cochran Boiler with the help of 6 neat sketch.

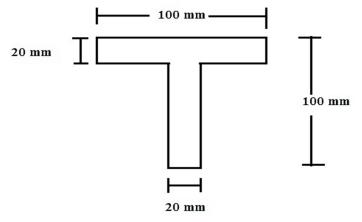

#### Q.6 Attempt any two:

2

- i. State and prove perpendicular axis theorem.
  - Derive expression for moment of inertia of a triangular section (with 5 base 'b' and height 'h') about an axis passing through its-

5

- (a) Base (b) CG
- iii. Determine the moment of inertia of the section about horizontal axis 5 passing through centre of gravity of section.

\*\*\*\*\*

# **Marking Scheme**

# **EN3ES18 Basic Mechanical Engineering**

Q.1				1	
	ii.	(c) Toughness Percentage composition of carbon in cast iron is-			
	iii.	(d) above 2 For a cyclic process, the change in the thermodynamic property is always			
	iv.	(a) Zero A refrigerator operates between - 3 °C and 57 °C. The COP is- (b) 4.5			
	v.	Range of compression ratio for petrol engine is- (a) $6-12$		1	
	vi.	Number of ports in four stroke diesel engine is- (d) Zero		1	
	vii.				
	viii.	Boiler generating steam at 50 bar pressure is called- (b) Medium pressure boiler			
	ix.	The point at which the total area of a plane figure is assumed to be concentrated is known as?  (c) Centroid			
	х.	Moment of inertia of a rectangle of base 4 cm and height 6 cm about horizontal axis, X-X, passing through CG is (cm <sup>4</sup> ) (a) 72			
Q.2	i.	<ul><li>(a) Hardness</li><li>(b) Hooke's Law</li></ul>	1 mark 1 mark	2	
	ii.	Construction of micrometre Diagram	1.5 marks 1.5 marks	3	
	iii.	Cross section area = $3.142 \times 10^{-6} \text{ m}^2$ Stress = $190 \text{ MPa}$ or $0.19 \text{ GPa}$ Strain = $0.91 \times 10^{-3}$ Elongation = $13.6 \text{ mm}$ % elongation = $0.091 \%$	1 mark 1 mark 1 mark 1 mark 1 mark	5
