## Faculty of Engineering

End Sem (Even) Examination May-2019 EE3CO10 / EX3CO10 Switchgear & Protection

Branch/Specialisation: EE/EX Programme: B.Tech.

**Duration: 3 Hrs. Maximum Marks: 60** 

Note: All questions are compulsory. Internal choices, if any, are indicated. Answers of Q.1 (MCQs) should be written in full instead of only a, b, c or d.

What are the terminal conditions in case of SLG fault, if the fault 1 Q.1 i. occurs in the phase A? (a) Vb = 0, Ia = 0, Ic = 0(b) Va = 0, Ib = 0, Ic = 0(c) Va = 0, Ia = 0, Ic = 0(d) Vb = 0, Ia = 0, Ib = 0Which among these is the most severe fault? 1 (a) Single line to ground fault (b) Double line to ground fault (c) Line to line fault (d) Symmetrical fault. Protective relays can be designed to respond to \_\_\_\_\_\_ 1 (a) Light intensity, impedance (b) Temperature, resistance, reactance (c) Voltage and current (d) All of these Plug setting of an electromagnetic relay can be altered by varying 1 (a) Number of ampere turns (b) Air gap of magnetic path (c) Adjustable back stop (d) None of these SF6 gas 1 v. (b) Has pungent odour (a) Is yellow in colour

(d) Is non-inflammable

(c) Is highly toxic The transient voltage that appears across the contacts at the instant of 1

arc extinction is called

(a) Recovery voltage (b) Re striking voltage

(c) Supply voltage (d) Peak voltage

P.T.O.

vii. A Merz-price protection is suitable for	1
(a) Transformers (b) Distributors	
(c) Feeders (d) Transmission lines	
viii. In large generators protection provided against external faults is	1
(a) Inter-turn fault protection	
(b) Sensitive earth fault protection	
(c) Biased differential protection	
(d) All of these	
ix. Ungrounded neutral transmission system is not recommended because	ause 1
of system	
(a) Insulation being overstressed due to over voltages	
(b) Insulation overstress may lead to failure and subsequent phase	e to
phase faults	
(c) Being inadequately protected against ground fault	
(d) All of these	
x. Which of the following statements is incorrect?	1
(a) Lightning arrestors are used before the switchgear	
(b) Shunt reactors are used as compensation reactors	
(c) The peak short current is (1.8 xV2) times the A.C. component	
(d) The MVA at fault is equal to base MVA divided by per	unit
equivalent fault reactance	
i. Explain unsymmetrical fault?	4
ii. The section bus-bars A and B are linked by a bus bar reactor rate	_
8000KVA with 10% reactance. On bus-bar A, there are	
generators each of 10,000 KVA with 10% reactance and on B	
generators each of 12000KVA with 12% reactance. Find the ste	
MVA fed into a dead short circuit between all phases on B with	•
MA Icu into a ucau short cheuit between an phases on B with	

Derive an expression for fault current and phase voltage for line to

Mention different types of relays? Discuss their field of applications.

Describe the construction and principle of operation of an induction 6

line fault by symmetrical components method.

type directional over current relay.

Q.2
