Faculty of Engineering

End Sem (Odd) Examination Dec-2022 CE3CO10 Hydraulics & Hydraulic Machines

Programme: B.Tech. Branch/Specialisation: CE

Duration: 3 Hrs. Maximum Marks: 60

Note Q.

		should be written in full instead	of only a, b, c or d.	ers (
) .1	i.	Eddy viscosity is a turbulent tr	ansfer of	1
		(a) Fluid ((b) Heat	
		(c) Momentum ((d) Pressure	
	ii.	The steady- state flow must sat	tisfy	1
		(a) Kirchhoff's law ((b) Newton's law	
		(c) Rutherford's experiment (d) Kepler's law	
	iii.	Calculate the mean hydraulic	depth of a channel having top width	1
		of 7m and cross-sectional area	of $35m^2$.	
		(a) 4m (b) 5m ((c) 6m (d) 7m	
	iv.	Calculate the side slope of a	trapezoidal channel section having	1
		base 8m, depth 4m and the hyd	Iraulic radius is 2.36m.	
		(a) 1/6 (b) 1/3 ((c) 1/2 (d) 1/4	
	v.	Which of the following assump	ptions about a GVF is false?	1
		(a) Channel is prismatic.		
		(b) Pressure distribution is hyd	rostatic.	
		(c) Flow characteristics change	e with time.	
		(d) Roughness coefficient is co	onstant.	
	vi.	The compressible flow is assur	ned to be	1
		(a) Isentropic ((b) Adiabatic	
		(c) Polytropic ((d) Both (a) and (b)	
	vii.	Fluid speed before the hydraul	ic jump is	1
		(a) Critical ((b) Super critical	
		(c) Sub critical ((d) Dynamic	
				_

P.T.O.

	viii.	Fluid height before the hydraulic jump is	1
		(a) Normal (b) Low (c) High (d) Zero	
	ix.	Hydraulic energy is converted into another form of energy by	1
		hydraulic machines. What form of energy is that?	
		(a) Mechanical energy (b) Electrical energy	
		(c) Nuclear energy (d) Elastic energy	
	х.	Which among the following control the flow rate?	1
		(a) Valve (b) Pump (c) Head (d) Tank pipe	
Q.2	i.	What is prandtl's mixing length theory?	2
	ii.	What is meant by boundary layer? Why does it increase with distance from the upstream edge?	3
	iii.	A thin plate is moving in still atmospheric air at a velocity of 5m/s. The length of the plate is 0.6m and width 0.5m. Calculate: (a) The thickness of the boundary layer at the end of the plate (b) Drag force on one side of the plate. Take density of air as 1.24kg/m³ and kinematics viscosity 0.15	5
OR	iv.	betermine the thickness of the boundary layer at the trailing edge of smooth plate of length 4m and of width 1.5m, when the plate is moving with a velocity of 4m/s in stationary air. Take kinematic viscosity of air as 1.5*10 ⁻⁵ m ² /s.	5
Q.3	i.	What is the relation between Manning's constant and Chezy's constant?	2
	ii.	Derive the condition for the best side slope of the most economical trapezoidal section and also derive hydraulic mean depth must be equal to half the depth of flow.	8
OR	iii.	Find the discharge through a rectangular channel 14m wide, having a depth of water 3m and bed slope 1 in 1500. Take the value of $N=0.03$ in the Kutter's formula.	8
Q.4	i.	Explain the terms: (a) Critical flow (b) Sub-critical flow (c) Super-critical flow	3

	ii.	What is specific energy curve? Draw specific energy curve and	7
OR	iii.	then derive expression for critical depth and critical velocity. Derive an equation of gradually varied flow.	7
Q.5	i.	Explain in brief rapidly varied flow.	4
Q	ii.	Explain the term hydraulic jump. Derive an expression for the depth of hydraulic jump in terms of the upstream Froude number.	6
OR	iii.	Explain the terms:	6
		(a) Energy dissipation (b) Positive surges (c) Negative surges	
Q.6		Attempt any two:	
	i.	A pelton wheel is to be designed for the following specifications: shaft power= 11772 kW, Head= 380 m., speed= 750 rpm, overall efficiency =86%, jet diameter is not to exceed one sixth of the wheel diameter. Determine:	5
		(a) The wheel diameter(b) The number of jets required(c) Diameter of the jet.	
		(Take $K_v = 0.985$ and $K_{u1} = 0.45$)	
	ii.	Differentiate between:	5
		(a) The impulse and reaction turbine	
		(b) Centrifugal and reciprocating pump	
	iii.	The internal and external diameters of the impeller of a centrifugal pump are 200mm and 400mm respectively, the pump is running at 1200rpm. The vane angles of the impeller at inlet and outlet are 20° and 30° respectively. The water enters the impeller radially and velocity of flow is constant. Determine the work done by the impeller per unit weight of water.	5

Marking Scheme CE3CO10 Hydraulics & Hydraulic Machines

Q.1	i	Eddy viscosity is a turbulent transfer of	1
		c)Momentum	
	ii	The steady- state flow must satisfy	1
		a)Kirchhoff'slaw	
	iii	Calculate the mean hydraulic depth of a channel having top	1
		width of 7m and cross sectional area of 35m ² .	
		b)5m	
	iv	Calculate the side slope of a trapezoidal channel section having	1
		base 8m, depth 4m and the hydraulic radius is 2.36m.	
		c)1/2	
	v	Which of the following assumptions about a GVF is false?	1
		(c) Flow characteristics change with time.	
	vi	The compressible flow is assumed to be	1
		a)Isentropic	
	vi	Fluid speed before the hydraulic jump is	1
		b)Supercritical	
	viii	Fluid height before the hydraulic jump is	1
		b)Low	
	ix	Hydraulic energy is converted into another form of energy by	1
		hydraulic machines. What form of energy is that?	
		(a) Mechanical energy	
	X	Which among the following control the flow rate?	1
		a)Valve	
Q.2	i	What is prandtl's mixing length theory?	2
		prandtl's mixing length theory -02 marks	
	ii	What is meant by boundary layer? Why does it increase with	3
		distance from the upstream edge?	
		Definition boundary layer -01 mark	
	;::	concept -02 marks	
İ	iii	A thin plate is moving in still atmospheric air at a velocity of	5
		5m/s. The length of the plate is 0.6m and width 0.5m. Calculate	
•		i) the thickness of the boundary layer at the end of the plate and	

		ii) drag force on one side of the plate. Take density of air as	
		1.24kg/m3 and kinematics viscosity 0.15 stokes.	
		Formula -02 marks	
		Description -03 marks	
OR	iv	Determine the thickness of the boundary layer at the trailing edge of smooth plate of length 4m and of width 1.5m.when the plate is moving with a velocity of 4m/s in stationary air. Take kinematic viscosity of air as 1.5*10 ⁻⁵ m ² /s.	5
		Formula -02 marks	
		Solution description -03 marks	
Q.3	i	What is the relation between Manning's constant and Chezy's constant.	2
		Manning's constant -01 mark	
		Chezy's constant -01 mark	-
	ii	Derive the condition for the best side slope of the most economical trapezoidal section and also derive hydraulic mean depth must be equal to half the depth of flow.	8
		Diagram -02 marks	
OD	iii	Derivation -06 marks	0
OR	111	Find the discharge through a rectangular channel 14m wide, having a depth of water 3m and bed slope 1 in 1500. Take the value of N= 0.03 in the kutter's formula.	8
		Diagram -02 marks
